

## **4. Tools and Standards**

- **Programming Languages**

React  
JavaScript  
CSS  
HTML

- **Software (IDE)**

Visual Studio Code

- **Process Model**

We have followed a list of tasks that we had on GitHub and we had them review prior to merging into our main branch.

## **5. Configuration Management Plan**

For this project we are using GitHub to store, upload and maintain our project. This helps to keep track of issues and assigned dates of current issues. Our main project is uploaded to a main branch. The project participants can create individual branches to make changes to the files. This will make it easier to merge the files to main branch when the files are created and tested.
